

# one step

for biosafe concrete wall construction

Introducing...

 SNAPLockTight

with

Octaform's SNAPLockTight panel creates a completely sealed wall surface that's watertight, airtight and CFIA (Canadian Food Inspection Agency) approved. No caulking is required where panels join.

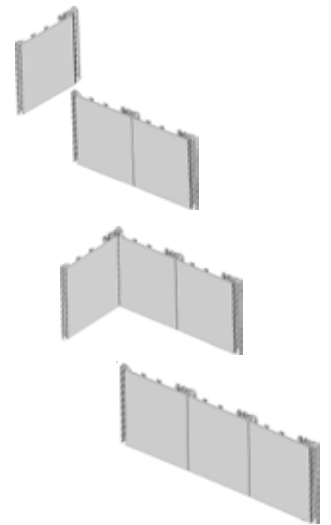

Utilizing a patented slide, snap and lock system, these panels are ideal for environments that are sensitive to bacteria, mold and mildew such as:

- food processing and handling
- cleanroom industrial fabrication facilities
- waste water treatment
- biodigesters

A highly reflective surface provides efficiencies in lighting and optional insulation enhances the concrete's thermal mass to provide a more energy efficient work environment for production.

SNAPLockTight can be used with Octaform's Finished Forming System for concrete wall construction or one sided Finished Linings System for tilt-up and pre-cast walls.

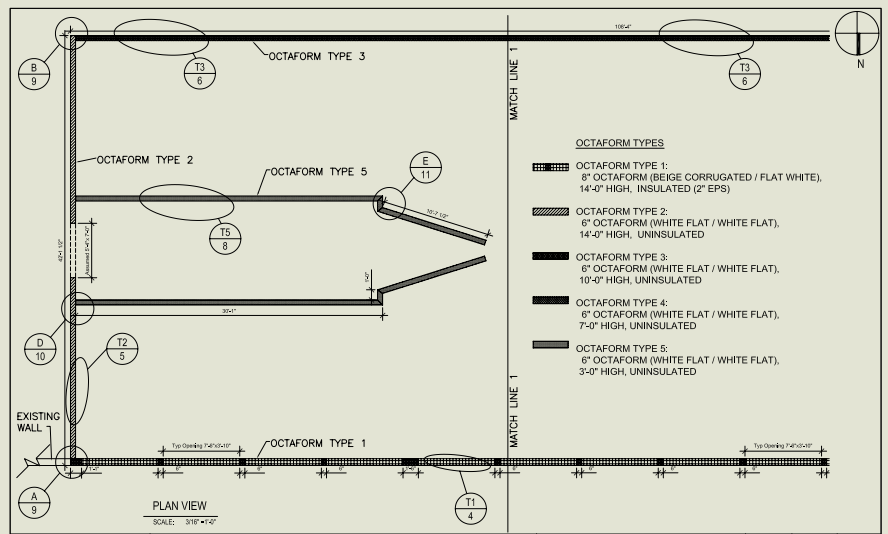

Octaform SNAPLockTight is supplied as a flat panel in white, beige and grey. Custom colors are available.
